Index

The references for the entries in this index are given by the unit number as an emboldened numeral followed by the page number. For example, **1.19** refers to *Unit 1*, page 19.

A

- abstract class **3.44**
- abstraction **5.47–48, 5.55, 5.59**
- access control **10.11, 10.46**
 - role-based **10.51**
- ACID properties **6.9**
 - atomicity **6.9**
 - consistency **6.9**
 - durability **6.9, 6.39**
 - isolation **6.9**
- action (in a policy file) **10.48**
- activation frame **2.35, 4.10**
- Active Badge **12.11**
- addressing **5.31**
 - numeric **5.31**
 - symbolic **5.31**
- ad-hoc network **12.8**
- annotation **7.26, 7.28**
 - Column **7.34–35, 7.43**
 - Deprecated **7.28**
 - EJB **7.53–55**
 - Entity **7.34, 7.43**
 - Id **7.34, 7.43**
 - JoinColumn **7.34–36, 7.43**
 - ManyToOne **7.36, 7.43**
 - OneToMany **7.36, 7.41, 7.43**
 - PersistenceContext **7.53, 7.55**
 - security **10.64**
 - Stateful **7.51, 7.53, 7.55, 7.59**
 - Stateless **7.48, 7.50, 7.55**
 - table **7.43, 7.55**
 - Table **7.34, 7.43**
 - TransactionAttribute **7.49, 7.53, 7.55**
 - WebMethod **11.39**
- applet **8.7, 9.6, 9.18–27**
 - browser compatibility **9.26**
 - lifecycle **9.22**
 - security **10.44, 10.50, 10.58,**
 - trusted **8.7**
 - untrusted **8.7**
- application
 - client **9.28**
 - client container **9.28**
 - domain **10.46**
 - gateway **10.38**
 - Java **9.6**
 - server **5.20**
 - service providers (ASPs) **1.31**
 - software **1.17**
- application framework **8.48**
 - JavaServer Faces **8.49**
 - Struts **8.48**
- application programming interface (API) **5.18, 5.26**
- ARPANET **1.13, 1.21**
- atomic action **3.13, 3.15, 3.17**
 - coarse-grained **3.13**
 - fine-grained **3.13**
 - indivisible **3.13**
- atomic objects **3.34**
- atomicity **6.8**
 - failure atomicity **6.9, 6.39**
- attack
 - brute-force **10.16**
 - denial of service **10.10**
 - homograph **10.9**
 - man-in-the-middle **10.10**
 - middle person **10.10**
 - person-in-the-middle **10.10**
 - replay **10.10**
- attribute (HTML) **9.11**
- attribute (of a session object) **8.20, 8.28, 8.52**
- auction sniping **9.46, 9.54**
- auditing **10.11**
- authentication **10.11**
 - challenge approach **10.26**
 - hierarchy of trust **10.26**
 - JAAS **10.51**
- auto-commit mode **6.47**
- availability (of a server) **5.21**
- availability (of a system) **10.11**

B

bandwidth 1.33, 12.8
batch
 process 2.7, 2.26, 2.28
 processing 2.7, 2.27
BitTorrent protocol 5.57
blocking 5.29–30
Bluetooth 12.9, 12.25
Bond, James 5.17
broadcasting 9.41
buffer 2.14, 2.16, 3.6, 5.29
 circular 3.7
 overflow error 10.41
business
 logic 5.20
 process 11.44
 tier 8.6
busy-waiting 2.14–15, 3.19
bytecode 4.7
 verifier 4.10, 10.43

C

cache 2.9
 flush 4.19
 invalidation 4.19
caching 5.11
causality 9.49, 9.52
cell (of a transceiver) 12.7
central processing unit (CPU)
 see processor
centralised computer system 1.12
certificate
 certifying authority 10.28
 digital 10.28
 root 10.28
 web of trust 10.29
chat room 5.39
checksum 10.30, 10.35
chocolate-cake baking model 12.14–21
cipher 10.14
 block 10.17–18
 Caesar 10.15
 exponential 10.22
 rail-fence 10.16
 stream 10.31–32
 Vernam 10.31

ciphertext 10.14

class

ArrayList 4.28–30, 4.49–50
CopyOnWriteArrayList 4.29, 4.50
CountDownLatch 4.38–39
LinkedList 4.28, 4.50
LocateRegistry 7.11, 7.13, 7.19–20, 7.22
ReentrantLock 4.34–37
RMISecurityManager 7.19, 7.22
Semaphore 4.37–38
Scanner 7.20, 7.54
ThreadPoolExecutor 4.41–42
UnicastRemoteObject 7.10, 7.12, 7.18, 7.21

class file format 4.9–10

class loader 4.10, 10.42

class path 7.16–17, 7.19, 7.21

click fraud 10.8

client

applet 9.18–27
application 9.28–32
fat 9.6
rich 9.6
thick 5.15, 5.22, 9.6
thin 5.21–22, 9.6, 9.8–17

client polling 9.34

client–server paradigm 12.15
 code on demand 12.18
 mobile agent 12.20
 remote evaluation 12.16

clock

atomic 9.47
local 9.46

clock skew 9.46

code base 10.45

code reordering 4.13

collision (input table) 10.29

Common Data Representation (CDR)
11.18, 11.23

Common Gateway Interface (CGI) 8.9

Common Intermediate Language (CIL)
